

White Water

Stadium White Water Award

Award Description

This award is designed to develop your ability to apply appropriate decision making skills for a safe day out white water paddling on a man-made, white water venue.

Extended Award Description

Your Stadium White Water Award endorses your skill, judgment and decision making to ensure a successful session on a man-made, white water venue. You will be confident in paddling on moving water with proficient skills to be in control throughout. Your award should be seen as a sound basis for building the experience and knowledge associated with Progressive Stadium White Water Award holders.

Award Content

1. Location

To have an enjoyable session on the water, we need to make some key decisions to ensure we choose the right man made white water venue.

Key factors influencing our decisions include the water levels, the grade of water, the weather, our fellow paddlers and features of the location we choose. We can take each of these factors into consideration and ask ourselves some questions to ensure the correct decisions are made:

Factor: Water conditions

We may need to know: What is the current water release? Is this volume of water safe for our ability? What could affect this? How might we find out this information? What is the grade of the water we are going to be paddling on? Does the grade change at any point? Is this the correct grade for our ability?

Are there any hazards at the venue that we need to be aware of? Is the course configuration as expected or have there been any changes made?

Factor: Weather conditions

We may need to know: What is the forecast for the day? How will this impact our paddle? Will the forecast change our clothing decisions? Will the forecast impact on the safety precautions we take?

Factor: Access and environment

We may need to determine: What restrictions might there be at the venue we are paddling? Where will we access/egress the water? How would we direct support to us in an emergency situation?

2. Getting Ready

Before getting to the water we must choose suitable kit and equipment and have the correct knowledge to use it. Key points we may consider are:

What will we wear?

What are the clothing options available to us? Why might we choose one over another? Are we confident in the use of our chosen personal safety equipment and considered the venue rules for the use of slings/ropes?

What will we use?

What are the different equipment and boat options available and why might we choose one over the other? How might different boat designs impact our paddling?

What will we take?

What additional equipment might be useful to carry on the water with us? What safety kit would it be useful to have with us? Does the venue allow us to leave kit on the bank?

Consideration: Getting to the water

We may need to determine: What is the best way to carry, load and secure our craft to protect ourselves or others from injury and prevent unnecessary damage? How will we get our craft and additional equipment to the water? Are the water and weather as expected? What other factors may we need to take into consideration before we get on?

3. At the Venue

Before we get on the water we need to be confident in our ability to deal with the complications it might bring. A man-made venue is usually a shared space; we must also be aware of other users and consider how we will safely get on the water.

Consideration: Do we need to sign in or hold a membership for the venue? Other users - we sometimes paddle at busy times. We may need to share the water with kayakers and rafters. To do this safely, an 'etiquette' amongst these users has developed to minimise conflict and help everyone enjoy the venue. Does the venue have specific 'etiquette' requirements? It is also important to know and take into consideration about other sessions taking place – such as rafting, freestyle and slalom.

We may need to consider: Who else is in the area? What is the etiquette here? Where can we park and change considerately to other users? Who else is paddling with us? What is their current ability? Are we aware of their motivations?

Consideration: Safety and rescue

We may need to know: How can we protect ourselves and others from any potential hazards? What damage to our health might repeated immersion in the water cause? How can we help prevent this becoming an issue? What would we do if someone we are paddling with gets really cold or overheats? What potential injuries might we need to treat? How might we do this? What additional safety equipment might be useful to carry and have access to?

4. White Water Skills

White water paddling is a dynamic activity taking place in an ever changing environment. We need to be able to drive our boats proactively around the water. When paddling we should be in control. Key features of being in control include us developing our skills and understanding how and where to apply them. Taking all events and considerations on a paddle into account, we can improve our problem solving skills to create a successful session.

Skill: Crossing flow

We may need to consider: When might we need to stop or cross flows? What types of flow might we need to cross? How can our speed, angle, edge, timing and use of body position impact the outcome? How can we look to future water to make our crossing successful?

Skill: Maintaining direction

We may need to consider: What factors will we need to consider to keep our craft tracking? How will we effectively use linked strokes to maintain direction? How can we use the water to help us maintain direction?

Skill: Changing direction

We may need to consider: Which features can we use to assist us in changing direction? How will we spot and use them? Which strokes might we use to change direction? How else can we aid a change of direction?

Skill: Paddling down the course

We may need to consider: How can we best choose our route down the venue and identify features that we want to use that aid us? What features do we need to avoid? How can we use our forward paddling to drive our boat effectively to where we want to be?

Skill: Dealing with mishaps

We may need to consider: What is our strategy to get back on course and in control? What can we do to prevent getting pushed over? We need to have the ability to roll between rapids/features. How will we deal with being out of the boat? How would we safely get ourselves or others back to the bank and back with their craft? How would we retrieve loose kit, equipment or boats? What factors might affect our decisions on how we retrieve these?

5. After the Session

Every paddle session is an opportunity for learning and improving. We can use every session to aid us in our development by reflecting on our session.

Look around: Have conditions changed whilst we were out on the water? Was that expected? Did anything else occur which was not expected whilst on our session? How did we deal with that?

Watching what others do: How was our session in relation to others? Why did we/they have good lines down the venue? Are we able to relate their skills to ours?

Consider what you will take away: What have we learnt today? What can we focus on next time?

6. Future Development

Each day we spend paddling we further expand our skills and knowledge, creating a more enjoyable experience on the water. With no two experiences ever the same, we never stop learning.

Continually evaluating the choices we make creates a natural evolution of decision making ability and skills. When we reach a certain point in this, it may be worth considering moving onto the Progressive Stadium White Water Award.
